COMPLIANCE WITH LRN HIGH-SAFETY CHARTER

- 100% natural products
- No GMOs
- No gelatine
- No preservatives
- No side effects
- Ingredients meticulously selected for their total safety

> THE PRODUCT

URIFORM is the first dietary supplement for urinary complaints that supplies 40 mg of cranberry PACs per tablet to combat and prevent female urinary tract infections with maximum effectiveness.

> PERFORMANCE

URIFORM is the product with the **highest dose of cranberry PACs on the market**. The AFSSA (French Food Safety Agency) in its ruling of 6 April 2004 officially acknowledged the effectiveness of cranberry PACs in preventing the adhesion of *E.coli* bacteria to the walls of the urinary tract, when taken in daily doses of 36 mg of cranberry PACs.

URIFORM goes even further by being the first dietary supplement to offer **40 mg of cranberry PACs** per tablet, as the higher the concentration of cranberry PACs, the more effectively the product prevents *E.coli* bacteria from attaching to the walls of the urinary tract.

In case of an attack, **URIFORM** supplies 80 mg of cranberry PACs a day for rapid maximum effectiveness.

> USE

URIFORM can be used by all women as a course of treatment during an attack, at the first signs of urinary discomfort, and as a year-round protective course of treatment. As it is totally harmless, **URIFORM** can even be used by pregnant or lactating women.

> INSTRUCTIONS

As a course of treatment for an attack: 2 tablets a day (80 mg of cranberry PACs) for 5 days. If urinary discomfort persists after 5 days, consult a physician. Taking **URIFORM** will not hinder the doctor's diagnosis.

As a protective course of treatment: 1 tablet per day (40 mg of cranberry PACs) year-round.

> PACKAGING

Box of 28 tablets.

Available at pharmacies.

Recommended retail price: 14,90 €
